May 3, 2013

To Whom it May Concern:

This is to acknowledge the contribution of Mr. Sandor Szanyi that enabled us to enrich the list of applications of our review paper Altmann, Portela, Tél: *"Leaking chaotic system"*. When searching for examples of environmental relevance related to open chaotic advection, we were happy to learn that he had new results on three-dimensional advection in a wind-driven lake. The clarity and novelty of his approach in this type of problem motivated us to include in our review a description of his main findings, in particular of the strong depth-dependence of advection patterns, based on his publication that appeared in the "Proceedings in the Conference of Junior Researchers" of the Budapest University of technology, last year. He kindly prepared a nice color tableaux of his results for us, which considerably enriched our paper (and is properly acknowledged in it). Our paper will appear in the April-May issue of one of the most prestigious physics journals, *Review of Modern Physics* (impact factor 43.933).

It has been a pleasure to cooperate with Mr Szanyi on this subject.

Yours Sincerely,

Eduardo G. Altmann
