Zigzagged lines at Normafa

October 6, 2016 14:31 CEST [comment](#) Media's Architectural Prize: [MAP 2016 plans \[65\]](#) geolocation: [Budapest \[294\]](#) architects, creators: [Szintén Bianka \[2\]](#), [Borbás Renáta \[1\]](#), [Borbás Réka \[2\]](#), [Szarvas Richárd Zoltán \[2\]](#), [Szigony János Gergely \[1\]](#)

Designing the Normafa pavilions, 5 young architect chose a natural material for the structure and the facade as well, the pavilions would be wooden houses. They tried to keep a traditional line as everyone use to it over there, because it has a special mood, and it is keep the houses close to the nature.

„One of the most frequented green spots of Budapest, Normafa (Norma Tree) is a well-known place for everyone living in Budapest. Youngsters and adults all enjoy the beautiful scenery, the fresh air and the panoramic view at 477 metres high in the Buda Hills. In the surroundings, restaurants await those who grow tired after exercising. For those visiting Budapest, nearby hotels promise peace and calmness, splendid panorama and environs that hotels in the city centre cannot offer. Normafa is a favourite walking destination of those of us living in Budapest. If you have not been to Normafa yet, let us invite you to discover the beauty of the Buda Hills in the heart of our capital.”¹

Normafa and its surroundings are located on the Western outskirts of Buda. Most of the area is covered by

forests. One can get to Normafa by various means of transportation.

2016 springs the council of Hegyvidék in Budapest advertise a competition for Normafa's new pavilions. As time passes, the area became to a very famous and visited area. During one weekend more than 10.000 people are crossing here, winter and summer time as well. During the cold period Normafa is going to be a skiing area, and at the summer it is perfect for a tour. Nowadays the visitors have possibility to eat some special Hungarian food (like lángos, kürtöskalács) in Normafa during the trip. But the reason is the competition is, that every owner of a pavilion use different design, different ingredients, so it has no image design.

In Normafa there is 6 different park area, where the new pavilions are needed.

We created a group, and decided to design new pavilions for Normafa.

The main idea of the conception was to create a modular „house”, what can stand by own, or it can be classified. The pavilions had to be flexible about the function, cause some of them would be a small shop, and the other a cooking area, or just a shelter from the rain.

We choose a natural material for the structure and the facade as well, the pavilions would be wooden houses. We tried to keep a traditional line as everyone use to it over there, because it has a special mood, and it is keep the houses closer for the nature.

For all of the vendor and shop keeper it is important to show and present the name and the brand of the shop, so we designed a place for them. On the main facade is the place for advertisement, which can be very varied, but still keep the shape of the poster place for all of the pavilion.
