Dear Tamás Huzsvár, Richárd Wéber, Csaba János Hős, Dr.,

We have reached a decision regarding your submission to Periodica Polytechnica Mechanical Engineering, "Analysis of the segment graph of water distribution networks".

Our decision is: **Accept Submission on condition that the final version meets formal requirements**

Please upload your paper in final form. **The final version is due within 4 weeks.** Should you not be able to meet this deadline, please contact us as soon as possible. Otherwise, we assume that the paper is withdrawn. By uploading the final version, you declare that this paper has not been and will not be submitted to other journals or conferences for publication.

Here is an [MS Word Template, sample file and description](#) for preparing the final version of the manuscript. When the final version is ready, please login the on-line journal system and select the mentioned paper by clicking on its author name/title. The program will open the Copyediting page where you should start the Copyediting Discussions by clicking on the Add discussion link. The files of the final version should be attached to this discussion by clicking on the Upload File link. The Message body should explain the roles of attached files. We expect an Article text source prepared with this [MS Word Template](#). **Figures should be uploaded as separate files and the text source should not embed them. However, the text source should clearly identify where figures are to be inserted by our copy editor.**

We also require an Article text PDF file to show the final outlook of the paper. This PDF file is used only for checking the typesetting.

Please follow the instructions very carefully to make the final typesetting easy and error free. Should the submitted final version not meet the requirements stated here, we shall ask revision and may reject the publication of your paper even in this phase of the procedure.

ILLUSTRATIONS

Figures should be uploaded in separate files. **Bitmap images are expected in jpg, png, gif or tiff formats, vector graphics in eps or pdf formats.** Please do not create line drawings with the built-in features of Microsoft.

It is essential that the bitmap images have sufficient resolution to allow faithful reproduction (**300 dpi or more**). To determine the optimum resolution (width x height) of an image, measure the width and height as it appears in your document (in millimeters), and then multiply those two values by 12. For example, a square image of 80 mm wide, i.e. having the width of a single column, the optimal size is about 1000 x 1000 pixel resolution and should be at least 600 x 600.

The dimensions of the figures have strict limitations: the **maximum width** of them in a column is 89.5 mm, the maximum width for a two-column picture is 183 mm, and for a wide picture with side-caption is 120 mm. So try to keep lettering in a figure resized for the manuscript in a readable but moderate size (ideally equivalent to 8-10 pt).

BIBLIOGRAPHY

Bibliography (References) should be complete. Each item must have proper and not misunderstandable data (see the sample Word file or its PDF version for examples). Please **add the DOI number** or URL of a full-text version if it exists. The DOI of journal papers can be found in page <http://www.crossref.org/SimpleTextQuery/> (you need to register first). DOIs must be given for conference papers, too.

The bibliography style for Mendeley users:

<https://cs1.mendeley.com/styles/481588271/periodica-polytechnica-num-doi-2>

Our Copy Editor will check all figure and bibliography requirements and lets typesetting start only when all of them are met. The precise preparation of your final version speeds up the publication of your paper.

As soon as typesetting is ready, you will be asked to check it within a few days. Then, your paper will appear in the "online first" section of the journal and will immediately receive a DOI.

Thanks for your cooperation and best regards

Péter János Szabó
