Letter of Invitation for Máté Krausz

To Whom It May Concern,

I hereby invite Máté Krausz, for an internship in my laboratory at the University Hospital Freiburg, Center for Chronic Immunodeficiency, for up to 12 months, starting on 1st September 2017, or later.

During his stay, Máté will work on a project, which will better characterize the function of ADA2, supposedly an enzyme to catabolize adenosine, but when it is missing, causing a specific form of immune dysregulation, termed deficiency of ADA2 (DADA2).

Máté Krausz is a 10th semester medical student at the Semmelweis University, Budapest. He interviewed (on Skype) very well on March 28th this year with me and Dr. Proietti. Moreover, Máté provided us within a respectable 5-page essay on ADA2 and its deficiency within a short notice period of just 5-days (available upon request).

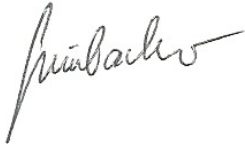

This fellowship will not only enhance Máté's knowledge in the field of Primary Immunodeficiency Diseases but it will also be the basis of a future career as a physician scientist. Máté will have the opportunity to focus on the study of specific aspects of immune dysregulation due to ADA2 deficiency, which represents an exciting area of research. He will acquire experience, international perspective, global networking, and tools to contribute to the field of immunology.

During his internship, Máté will work in my laboratory and be directly supervised by Dr. Michele Proietti, an experienced postdoctoral fellow in my group.

Should you have any questions, please do not hesitate to contact me.

Yours sincerely

A handwritten signature in black ink, appearing to read 'Grimbacher', with a stylized, flowing script.
