

APPLICATION FOR THE 25TH STUDENT COMPETITION URBAN DESIGN AWARD ACADEMIC YEAR 2019/2020

WORK TITLE

Budapest architectural and social rehabilitation

ANOTATION

In our plan we tried to find solutions that could bring different generations and social groups together with the involvement of the community. That is why a cohousing apartment was planned for career starters, community garden next to the kindergarten and small shops in the inner courtyards, which are the central elements of the renewal of the residential blocks. On the ground floors, we have replaced residential functions in each building with services that create jobs. The interior of the block was designed as a green surface that can be used by everyone. The vibrant atmosphere also enhances the popularity of the place and also improves the connections of the people living here. An important part of our plan is the promenade which presents the rich heritage of the Hungarian poet, Attila József. With the help of this promenade we would strengthen the local connection of the residents and give them a tool to give the area a positive reputation and strengthen the pride of the locals.

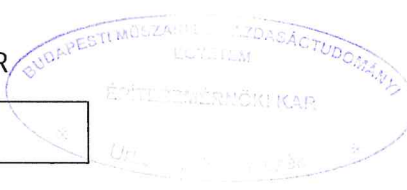

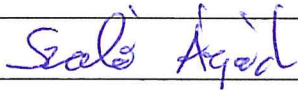

TASK ASSIGNMENT

In this practical urban design semester the task was to analyze a specific urban environment, then to prepare an urban design concept for a bigger urban entity in group work of 2-4 students, and later develop it into an urban scaled architectural design (development or master plan). In 2020 the task was connected to the „Changing Climates” thematic motto of the semester and the site was defined in the 9th district of Budapest focusing on an area with historically developed building stock and with defining possible urban interventions on unused development areas and public spaces

STATEMENT OF WORK SUPERVISOR TO TASK ASSIGNMENT

This semester work is among the best projects of the 2020 spring semester and is specially recommended for the Urban Design Award by the tutors of the Department of Urban Planning and Design, BME. / Árpád Szabó (head of the department)
