Subject:	Acceptance of NCOMMS-19-01080D
Email	Dear Dr Jakus, We are delighted to accept your manuscript entitled "Nucleoside-Modified VEGFC mRNA Induces Organ-Specific Lymphatic Growth and Reverses Experimental Lymphedema" for publication in Nature Communications. Thank you for choosing to publish your interesting work with us. Licence to Publish The corresponding author of an accepted manuscript is required to complete an Open Access Licence to Publish on behalf of all authors; a link to the online portal through which you can submit this licence agreement will be sent in a separate email. Article-processing charge If applicable, you will also receive a link to our payment application where you can provide your billing information and pay your article-processing charge (APC) via credit card or by requesting an invoice. Please note that your paper cannot be sent for typesetting to our production team until we have received the above information. If you have not received the Licence to Publish and APC (if applicable) emails within three working days, please contact us at naturecommunications@nature.com In recognition of the time and expertise our reviewers provide to Nature Communications's editorial process, as of November, 2018, we formally acknowledge their contribution to the external peer review of articles published in the journal. All peer-reviewed content will carry an anonymous statement of peer reviewer acknowledgement, and for those reviewers who give their consent, we will publish their names alongside the published article. For more information, please refer to our FAQ page: https://www.nature.com/documents/ncomms-reviewer-information.pdf We will edit your manuscript to ensure that it conforms with our house style and send you a link to an online eProof for checking within approximately two weeks of the above information being supplied. Please read your proof with great care to ensure that the sense has not been altered. We also suggest you discuss the proof with your co-authors, but please ensure that only one author communicates with us and that only one set of corrections is returned via the online correction in the eProof. The corresponding (or nominated) author is responsible on behalf of all co-authors for the accuracy of all content, including spelling of names and current affiliations. Your proofs should be returned within two working days. If you are unable to personally check the proofs when you receive the link to the online eProof, please forward it to a co-author who will be able to coordinate the corrections on your behalf. The link given in the email will be accessible by all co-authors, but please incorporate all corrections prior to submitting the proof as only one set of corrections can be returned. Please note that your Supplementary Information files may have been edited for style and are now finalized. They will be uploaded directly to the Nature Communications website in preparation for publication of the Article. Any requests to make changes will only be considered in exceptional circumstances and will result in a delay to publication. If you opted into the journal hosting details of a preprint version of your manuscript via a link on our dedicated website (https://nature-research-under-consideration.nature.com), please note that we will now remove these details as your manuscript is no longer under consideration at Nature Communications. For more information, please refer to our FAQ page at https://nature-research-under-consideration.nature.com/posts/19641-frequently-asked-questions Acceptance of your manuscript is conditional on all authors' agreement with our publication policies (see www.nature.com/nature/authors/policy/index.html). In particular, your manuscript must not be published elsewhere and there must be no announcement of the work in the media until the publication date. At this stage, you should advise the press office at your institution if you wish to bring your work to the media's attention, so that they can start preparing any publicity for your work to avoid any unnecessary delays to the publication of your paper. Your paper will be published in approximately five weeks and will be assigned a publication date approximately three working days prior to publication. We will contact you at that point with publication details and embargo information. If you or your press office require more than 3 days' notice of publication, please contact NatureCommunicationsProduction@springernature.com. You should not distribute any materials until you have received confirmation of your publication date to respect our embargo. Your Article will be open for online commenting on the Nature Communications website. You may use the report facility if you see any comments which you consider inappropriate, and of course, you can contribute to discussions yourself. If you wish to track comments on your Article, please register for this service by visiting the 'Comments' section in the full text (HTML) version of your paper. As part of our efforts to communicate our content to a wider audience, we endeavour to highlight papers published in Nature Communications on the journal's Twitter account (@NatureComms). If you would like us to mention authors, institutions or lab groups in these tweets, and haven't done so already, please provide me with the relevant twitter handles via reply to this email. If you have not already done so, we would welcome the submission of material for the 'Featured Image' section on the Nature Communications home page. Images should relate to the content of your manuscript, but need not be contained within the paper. Suggestions should be sent by email to naturecommunications@nature.com. Please provide 1200x675-pixel RGB images. Unfortunately, we cannot promise that your suggestions will be used. A form to order reprints of your Article is available at http://www.nature.com/reprints/author-reprints.html#options If you have any questions about open-access invoicing or payment, please contact authororders@nature.com You can now use a single sign-on for all your accounts, view the status of all your manuscript submissions and reviews, access usage statistics for your published articles and download a record of your refereeing activity for the Nature journals.

We look forward to publishing your paper.

Best regards,

Francesco Conti, PhD
