Abstract:
5G mobile networks are developing rapidly and are increasingly being deployed in more and more places in our country not to mention around the world. These services are available not only to the general public but also to several industries. Industrial applications are often implemented using 5G SA (Stand Alone). For this reason, I created two separate measurement exercises to familiarize students with 5G technology on an all-encompassing systematic level. This will allow students studying at the university to keep up with today's modern mobile network systems. From this up-to-date knowledge they can benefit as the engineers of the future.
