

CERTIFICATE OF PARTICIPATION

Bavarian-Hungarian interdisciplinary student project on self-driving vehicles

Ádám Medvác, law student of the Széchenyi István University of Győr, actively participated in the Bavarian-Hungarian interdisciplinary student project on self-driving vehicles in the year 2023.

BAYHOST (Bavarian Academic Center for Central, Eastern and Southeastern Europe) is a cooperative institution of all universities, universities of applied science and art academies in Bavaria and supports international academic cooperation and students' exchange.

The project included:

- Meetings in Bavaria and Hungary for project work with students from different universities
- Software projects for simulating autonomous driving
- Hardware projects: building a model car with ready-to-use kits, going for static and dynamic challenges
- Guidance by experts from several universities

The project consisted of several steps:

- Kick-Off Meeting at Coburg University of Applied Sciences and Arts from 21-23 April 2023
- Second meeting at the Széchenyi István University of Győr, including an excursion to the ZalaZONE proving ground from 2-3 November 2023
- Final meeting in Bavaria from 30 November – 3 December 2023: workshop and mini-competition on lane keeping at Munich University of Applied Sciences, meeting with the formula student team at Landshut University of Applied Sciences

Ádám Medvác contributed to a report of a group of law students on how autonomous driving could be regulated on the European level. The participation and report of law students was highly appreciated, as autonomous driving was facing serious legal challenges. The report of the law students was presented at the final meeting at Munich University of Applied Sciences.

The goal of the project was to develop professional and human relationships between the participating students and to prepare them for working in an international and interdisciplinary environment.

Nikolas Djukić
Executive Director, BAYHOST
