**Investigation of body composition parameters in
patients with celiac disease on a gluten-free diet.
Prospective, multicenter, case-control study
(ARCTIC study)**

Selected as a poster communication at the 36th Association of European Coeliac Societies (AOECS) General Assembly held by the Spanish Federation of Coeliac Societies, FACE in Madrid from 14th to 16th of November 2024.

This is certified for curricular purposes.

Date: 22nd March 2025

Veronica Rubio
AOECS Secretary General
On behalf of the AOECS Board

Our evaluation committee has made the following comments on your work with the aim of helping you to improve the submitted project by encouraging you to continue developing scientific activities that seek to improve the quality of life of people with coeliac condition.

COMMENT 1:

It is a very interesting study and extols the benefits of collaboration between academia and associations. Underlining the power of prevention with the development of this study is a powerful tool to get closer to achieving institutional support.

COMMENT 2:

This is a very important study reinforcing the need of close follow up of adult CD patients after diagnosis. Further investigations should focus on trying to find the reason for the high rate of steatosis and specially of MASLD. In this respect dietary habits (consumption of processed foods, mediterranean diet.. etc) and others like exercise etc should be checked.

On behalf of AOECS, thank you very much for joining this open call and share your work with us.
