Reference Ms Kata Olasz

To Whom It May Concern

I am very pleased to offer my wholehearted support to Ms Kata Olasz's application to your University taught course programme. Kata visited our cancer laboratory in London at Queen Mary University of London, for 3 days in August 2018. She came very highly regarded from Dr Csaba Bodor, a longstanding collaborator at Semmelweis University in Budapest. Kata was a pleasure to have in the laboratory, she's particularly bright, personable and connected very well with the researchers she worked with and shadowed over the week. She grasped many complex concepts readily, relating to our work on blood cancers and the rationale behind the cloning and sequencing experiments from PCR reactions completed on a set of familial leukaemia patients. My sense is that she has both an appreciation and deep interest in basic and translational research, and could see that she has, through her own initiative, gained several unique experiences in research already. She would make an excellent addition to your taught programme.

Yours sincerely

Jude Fitzgibbon PhD
Professor in Personalised Cancer Medicine.
