Dear Emese,

Thank you for submitting your paper to the 2015 IAEA Isotope Hydrology Symposium. There are over 330 papers being presented, with about 430 participants registered, making this one of the largest Isotope Hydrology meetings we have ever hosted. The requests for oral presentations in turn far exceeded the slots available, and to accommodate as many oral papers as possible we have increased session lengths and reduced oral presentation times from 30/20 to 15 minutes. We will also have three separate poster sessions. We solicit your understanding if we were not able to accommodate a request for an oral presentation.

Your paper entitled "9 YEAR LONG MOISTURE SOURCE DIAGNOSTIC FOR THE PRECIPITATION IN DEBRECEN, EAST HUNGARY: IMPLICATIONS FOR THE CHANGES IN THE CLIMATE REGIME" has been evaluated by our Symposium team and has been assigned to:

Session: Isotope Hydrology Poster Session

Track: Isotopes in Precipitation

Type: Poster Presentation

This contribution's ID number is 108; please refer to this number in any correspondence. Your contribution date and timeslot will be sent soon. We hope to post the sessions online within a couple of weeks.

If you have further questions regarding the Symposium, or are unable to attend, please let us know by emailing us at [Isotope-Hydrology-Symposium-2015@iaea.org](mailto:2015@iaea.org).

Poster preparation guidelines can be downloaded from the conference website.

We urge you to make your accommodation arrangements as soon as possible, since there are several large concurrent meetings in Vienna in May 2015, and hotel availability will be at a premium. Details for discounted hotel rooms are found on the conference website.

We are looking forward to seeing you in Vienna in May!

Luis Araguas
